## **MBTI**

### **SECTION: 481**

#### **TEAM MEMBERS:**

- 1. NUR IZZAH AMANI BINTI HASMAYADI (245479)**
- 2. NURRADHIYAH BINTI RIDZUAN (247237)**
- 3. NUR SARAH BINTI AZMI (245746)**
- 4. NUR DINI SYAUQINA BINTI MOHD ASRI (245215)**

#### **INTRODUCTION**

This MBTI website was developed to introduce and provide understanding of personality types based on the Myers-Briggs Type Indicator (MBTI) test. The MBTI test contains around 90 to 100 questions that you answer to indicate your preference in various scenarios. These answers are then analyzed to determine which of the 16 personality types best aligns with your natural inclinations and behaviors, revealing insights into how you perceive the world and make decisions. The assessment categorizes these preferences into four dimensions: Introversion/Extraversion (I/E), Sensing/Intuition (S/N), Thinking/Feeling (T/F), Judging/Perceiving (J/P). Each dimension has two opposite poles, and your responses indicate where you fall on the spectrum for each. We developed this website because we wanted to provide an easy-to-understand, interesting, and interactive platform for anyone who wants to explore their personality, whether for learning, career, or self-development purposes. By understanding our own personality type and the types of others, individuals can appreciate different perspectives, work more effectively in groups, and pursue personal growth. Overall, MBTI serves as a tool for personal development, not as a way to limit or label people.

## **TASK DISTRIBUTIONS**

<b>NAME</b>	<b>TASK</b>	<b>JOB DESCRIPTION</b>
NUR IZZAH AMANI BINTI HASMAYADI	Technical Lead (Programming Languages & Tools + Features or Functionalities)	Selects and configures appropriate programming languages and tools for the project (e.g., HTML, CSS, JavaScript, VS Code).
NURRADHIYAH BINTI RIDZUAN	Problem Analyst (Problem Statements + Objectives or Goals)	Identifies the real-world problem the project aims to solve.
NUR SARAH BINTI AZMI	UI Designer (Website UI + References)	Designs the visual layout and user experience of the website.
NUR DINI SYAUQINA BINTI MOHD ASRI	Project Coordinator (Introduction + Task Distributions + Conclusion)	Writes and organizes the project introduction, team member responsibilities, and final summary

## **PROBLEM STATEMENTS:**

1. User struggles to relate their MBTI type with practical applications like career choices, relationships or study habits
2. Lack of user-friendly, interactive and visual platform to let the users explore more about their MBTI
3. Existing MBTI websites lack cultural sensitivity that makes it difficult for certain users from diverse backgrounds to relate and apply it
4. Most MBTI websites has limited personalization which does not follow users need and interest and can lead to less impactful experience
5. Too many MBTI-related information can lead to confusion and difficulties for users to find the accurate personality type

## **OBJECTIVE AND GOALS:**

1. To create a user-friendly and visually appealing website that introduces users to the MBTI personality framework
2. To create a simple and gamified MBTI website for users to discover more about their own MBTI
3. To provide personalized content like tips, career advice and study habits based on users MBTI type
4. To promote self-awareness and better interpersonal relationships through the responsible use of MBTI insights
5. To help users keep track about their personality development based on their daily life routine for future reference

## **PROGRAMMING LANGUAGE AND TOOLS**

This report summarizes the HTML, CSS, and JavaScript elements used in five different web page sketches. Each sketch includes a variety of design and structural features, as detailed below:

Homepage includes the following elements:

- The **navigation bar** uses **HTML and CSS** by structuring links with <nav>, <ul>, and <li>, and styling them for layout and appearance.

- The **side navigation menu (sidenav)** uses **HTML, CSS, and JavaScript** by toggling its width with the `openNav()` and `closeNav()` functions and styling its position and visibility.
- The **header** section uses **HTML** with `<div>`, `<h1>`, and `<p>` elements to display the site intro and welcoming text.
- The **animated background** uses **JavaScript and HTML** `<canvas>` element by rendering moving pastel-colored particles with radial gradients and `requestAnimationFrame()`.
- The **search bar** uses **HTML and JavaScript** by creating an input element and filtering MBTI type links live using `searchItems()` from `search.js`.
- The **image gallery carousel** uses **HTML, CSS, and JavaScript** by placing images in scrollable `<div>`s and enabling smooth scrolling via button clicks and mouse wheel events.
- The **content sections** (MBTI info and trivia) use **HTML and CSS** by organizing information with `<section>`, `<div>`, `<h2>`, and styling them for readability and alignment.
- The **images** are loaded using **HTML** `<img>` tags, pulling from both local folders (`mbti.img/`) and external sources like `16personalities.com` and `neris-assets.com`.
- The overall page layout and appearance use **HTML** for structure and **CSS** (inline and internal) for styling text, images, responsiveness, and visual effects like shadows and fonts.

About us page includes the following elements:

- **HTML** is used to structure the page with headings, profile cards, images, and navigation links.
- **CSS** is used to style fonts, colors, layout, spacing, shadows, and animations.
- A **sticky header** keeps the top menu always visible while scrolling.
- A **dropdown menu** shows MBTI types on hover in a clean grid layout.
- **Canvas and JavaScript** are used to add colorful animated background particles.
- **Image cards** for team members include hover zoom effects for interactivity.
- **Float and margin** are used to place profile cards side by side.
- The design is **responsive** and adjusts well on different screen sizes.
- A **footer image** is added to match the 16Personalities theme.

The navigation page introduces the types of MBTI:

- This webpage displays **four MBTI** personality types that fall under the **specific category**.
- Each type is **shown in a box** with an **image, name**, and **one short description**.
- **Clicking on any box** will take the user to a **separate page** for that personality type.
- The page includes a **sticky header** with the **website logo** on the left.
- The **navigation menu** has links to the **Meme page**, the **MBTI Test**, and the **About Us** section.
- The background uses a **light paper texture** to create a **soft, clean appearance**.
- Each content box **changes slightly** when **hovering**, giving a **subtle shadow effect**.
- No **JavaScript** is used; all effects are done with **HTML** and **CSS** only.

The MBTI page focuses on more details about each MBTI:

- **HTML** is used to structure the webpage content like **headings, images**, and **navigation**, while **CSS** is used to style the **layout, colors, fonts**, and **interactive elements**.
- A **sticky header** keeps the navigation bar **fixed at the top** while scrolling.
- A **dropdown menu** shows **MBTI types** using **hover effects** and **grid layout**.
- **Flexbox** is used to **arrange famous person cards** responsively.
- **Hover** effects are added to **content boxes** and the **footer** for interactivity.
- **Images** and content are arranged using **float** and **margin styles**.
- The layout is **responsive** and **adjusts across screen sizes**.
- No **JavaScript** is used; all effects are done with **HTML** and **CSS** only.

Take test page features emphasize modern layout techniques:

- A **button** is created using **HTML** structure and **CSS** for styling, allowing users to interact with the quiz interface (e.g., selecting answers, confirming choices, starting the test).
- The **background** is styled using **CSS**, applied to **HTML elements**, to enhance the visual appearance and user experience of the test environment.
- All **textual content** such as questions, headings, and result details is implemented using **HTML elements** like `<h2>`, `<p>`, and `<div>`, with **CSS** used to control layout, font, and spacing.

- **Images** are incorporated using **CSS background-image** properties to create a visually appealing layout and enhance the overall design aesthetics.
- All **test questions** are stored in a **JSON file**, which is dynamically fetched using JavaScript. This allows the questions to be easily managed, updated, or extended without modifying the core HTML or JS logic.
- This page uses **Firebase Firestore**, a NoSQL cloud database, to **store user data** such as names, MBTI types, and timestamps. This enables real-time storage and retrieval of quiz results.
- **Firebase** is initialized using a **JavaScript API** with a configuration object containing the project's unique credentials
- This page uses a **Goggle API key** to connect the Gemini AI chat box with Google server, enabling intelligent responses based on user input.
- When a user sends a message in the chat box, a JavaScript function will send it to the **Gemini API** endpoint.
- The **chat box** is styled using **CSS**, applied to **HTML elements**, to ensure that the user can use it efficiently with the proper size of chat box.

Meme page includes following elements:

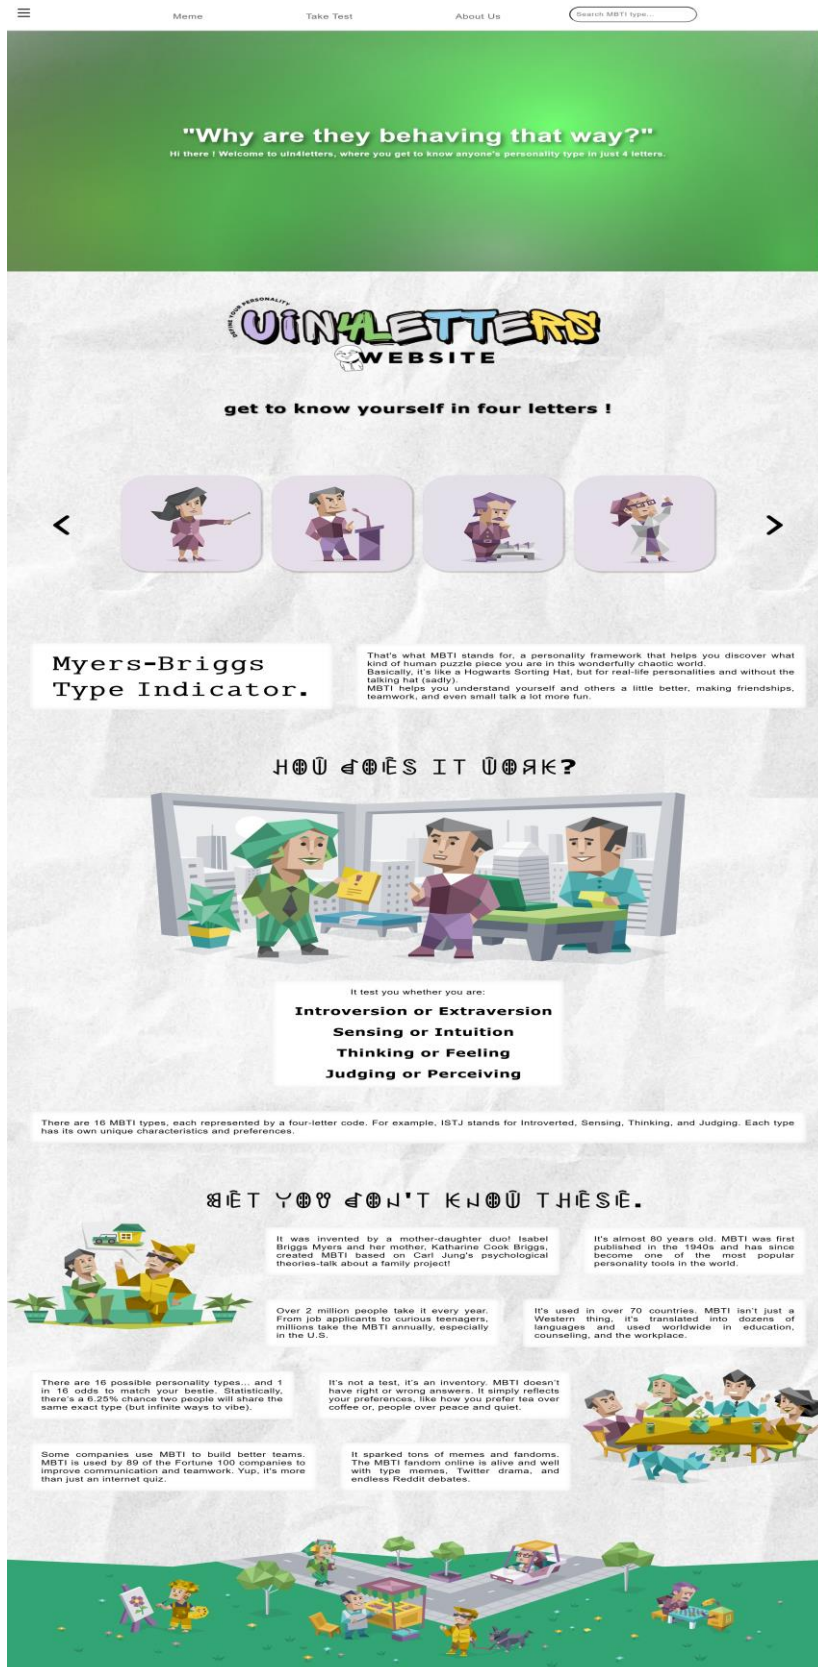

- **HTML** is used to structure the content, such as the navigation menu, dropdowns, canvas, and image grid.
- **CSS** styles the page with fonts, colors, layout spacing, hover effects, and flex/grid positioning.
- A **sticky header** keeps the navigation bar at the top of the page while scrolling.
- A **dropdown menu** under "MBTI Type" shows links to 16 MBTI personalities using a grid layout on hover.
- **Canvas and JavaScript** are used to generate colorful animated background particles.
- **Flexbox** is used to arrange image columns (`.dream`) in a responsive row (`.box`).
- **Hover effects** highlight dropdown items for better user experience.
- **Images** are displayed in vertical stacks in each column and styled with margin and border-radius.
- The layout is **responsive**, adjusting neatly across different screen sizes.
- **No external libraries** are used; everything is done with **pure HTML, CSS, and JavaScript**.

## **FEATURES AND FUNCTIONALITIES**

The website has many helpful tools to learn about the Myers-Briggs Type Indicator (MBTI). It includes a fun and easy-to-use personality quiz that tells users their MBTI type. After the quiz, users can read clear and simple descriptions of all 16 personality types, including their strengths, weaknesses, and how they usually act. The website also shows how different personality types get along with each other, both at work and in everyday life. There's also career tips and relationships, all based on personality types. These features help users understand themselves and others better.

# INTP

( Introverted, Intuitive, Thinking, Perceiving )

## Logician

### About

- INTP, or the "Thinker," is one of the 16 personality types identified by the Myers-Briggs Type Indicator (MBTI). INTPs are known for their analytical and logical thinking, often seeking to understand complex systems and theories. They are independent, innovative, and value intellectual autonomy.
- INTPs are often seen as quiet and reserved, preferring to spend time alone or with a small group of close friends. They enjoy exploring abstract concepts and theories, and they are often drawn to fields such as science, philosophy, and technology.
- INTPs are known for their creativity and originality, often coming up with unique solutions to problems. They are also highly adaptable and open-minded, willing to change their opinions based on new information or evidence.

### Strengths

- Analytical and logical thinking
- Innovative and creative problem-solving
- Open-minded and adaptable
- Independent and self-sufficient
- Value intellectual autonomy

### Weaknesses

- Can struggle with expressing emotions
- May come across as detached or aloof
- May struggle with social interaction
- May be more introverted than extroverted

### Relationship

- INTPs value intellectual compatibility in relationships and often seek partners who can engage them in deep conversations. They may struggle with expressing their emotions and may come across as aloof or detached. However, they are loyal and committed partners who value independence and autonomy.
- In friendships, INTPs enjoy spending time with like-minded individuals who share their interests and values. They may prefer small groups or one-on-one interactions over large social gatherings.
- In relationships, INTPs value intellectual compatibility and often seek partners who can engage them in deep conversations. They may struggle with expressing their emotions and may come across as aloof or detached.

### Career

- INTPs are often drawn to careers that allow them to use their analytical and logical thinking skills. They may excel in fields such as science, technology, engineering, and mathematics (STEM), as well as philosophy, research, and academia.
- INTPs value intellectual autonomy and may prefer to work independently or in small teams. They may struggle with rigid structures or rules and may thrive in environments that allow for creativity and innovation.

Some common career paths for INTPs include software development, data analysis, research, engineering, and academia.

### Famous person:

Albert Einstein

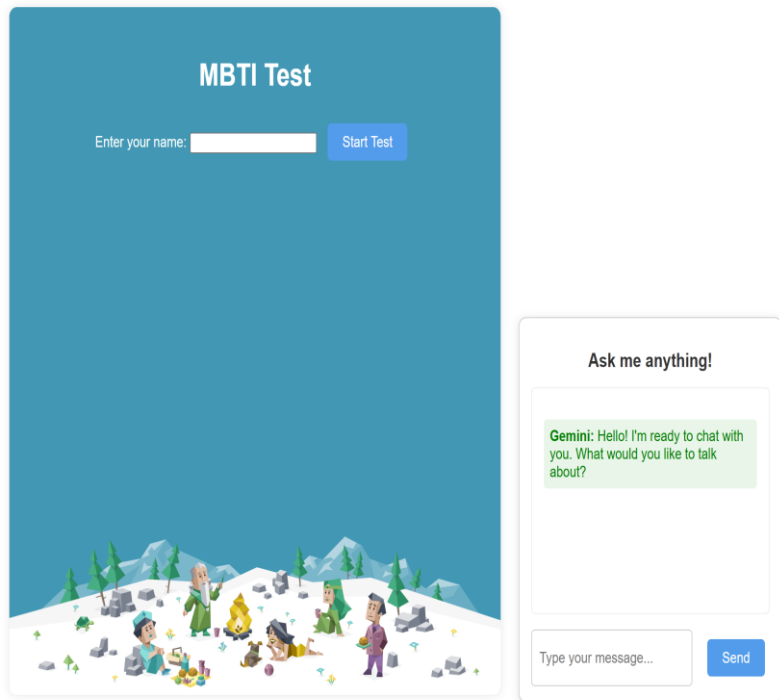

Bill Gates

Kim Seok Jin

Abraham Lincoln

Bored? Have a look at these memes.

In conclusion, the MBTI website is a useful tool for people who want to learn more about their personality. With easy-to-use features like the personality quiz, type descriptions, compatibility advice, and helpful articles, the website makes it simple to understand MBTI. It helps users improve their self-awareness, build better relationships, and make smarter choices in life and work.
